RESEARCH INTERESTS

Understanding Deep Neural Networks From A Scientific Perspective. Despite the ever-strong results achieved by deep neural networks, how to fully understand the behavior of deep learning remains mysterious, resulting in potential risks to our society and industry. I study and understand the behavior of deep learning from a scientific perspective, by conducting empirical experiments in practice.

Designing Efficient Sparse Neural Networks and Training Recipes. Costs associated with training and deploying modern deep neural networks have increased exponentially, beyond the reach of hardware development. I design efficient neural networks by inducing sparsity, improving the efficiency of deep neural networks without sacrificing performance.
