RESEARCH INTERESTS AND VISION

The Science of Deep Neural Networks. Despite the ever-strong results achieved by deep neural networks, how to fully understand the behavior of deep learning remains mysterious, resulting in potential risks to our society and industry. I study and understand the behavior of deep learning from a scientific perspective, by conducting empirical experiments in practice. I believe that we can enhance our understanding of neural networks by conducting scientific research on their practical behavior.

Efficient Neural Network Training and Scaling. Costs associated with training and deploying modern deep neural networks have increased exponentially, beyond the reach of hardware development. My research focuses on advancing sparsity as a promising solution to boost the efficiency, trainability & scalability of neural networks. I am keenly interested in large language models (LLMs), seeking to enhance our understanding of LLMs and make them an accessible tool for everyone.
